PACKING AND SHIPPING

Packing.—No extra charge is made to cover packing costs on most items. However, on items of a bulky nature, a packing or delivery charge may be made unless such material is ordered in connection with considerable other stock. No charge is made for delivery to freight depots or express offices. Plain and explicit shipping directions should be given with every order, naming mode and route for forwarding, otherwise, we will use our own judgment. Perennials, when shipped by rail, should always travel by express; other stock may travel either by express or freight, excepting that particularly bulky packages may not be accepted by the Express Company, and hence, must travel by freight.

The Pennsylvania Railroad gives us splendid forwarding facilities and through their terminals here, have lines radiating in all directions.

The Reading gives good service to points that are best reached over its lines. For connecting roads, nearby transfer points afford prompt service in all directions.

MOTOR TRUCK DELIVERY

Motor truck delivery of substantial orders is usually possible without charge within a reasonable radius of our nursery. Included in this area is Philadelphia and suburbs and the Metropolitan area of New Jersey as well as more local points. This service can be arranged to points of greater distance such as suburban New York, Western Connecticut and Long Island, to Baltimore, Washington, and Harrisburg. The cost of trucking depends upon the amount of the order and the length of haul. This is a matter of special arrangement.

PAYMENTS

Cash with order, excepting to persons who satisfy us as to their financial responsibility. Satisfactory Bank or Trade References are requested of persons desiring to open an account. An abatement of 2% may be taken if payments are made within 10 days from date of invoice. All accounts are due within 30 days, but to persons of approved credit with whom we have had previous dealings, an extension of the time of payment can usually be arranged if desired.

CLAIMS

Claims of any nature must be presented within 10 days from date of arrival of stock. If shipments should be delayed or damaged in transit, have them examined at the depot before receipt them, and any complaint arising should be noted on the freight or express receipt, together with the agent's acknowledgement. This will help in recovery of damages.

All terms are subject to change without notice.

PLANT ALL YEAR ROUND

Many catalogs contain definite recommendations regarding Spring and Fall planting, but so much depends on local conditions that each planting problem must be considered individually.

We are prepared to plant anytime, Spring, Summer, Autumn or Winter. During the summer months when shrubs and perennials are in bloom you may select the colors you want and have them planted on your lawn providing you have facilities for watering. Winter is an ideal time to move large trees with frozen ball of earth.

As a general rule the Spring and Autumn seasons will be the times when Nurserymen are rushed to the limit of their endurance. Summer and Winter is an ideal time for planting from the Nurseryman's standpoint because it helps to keep his organization busy during slack seasons. On the other hand Summer planting may be an advantage if you desire to personally direct plantings at your summer home. Large shade trees may be planted during the Winter when the ground is frozen with little damage to the lawn.

Tell us your problems and we will plant anytime to suit your convenience.

Does the entrance to your home bid welcome to your guests? A well arranged entrance planting of Moon's Hardy Plants will help to establish a feeling of gracious welcome.

MOON'S BIG TREES

For Immediate Effects

Immediate shade—with all the air of being long established—is possible through the use of Moon's Big Trees. Handled with ample balls of earth, such trees can be readily transferred from our Nurseries to your lawn.

Fine specimens are offered and include Maples, Beech, Oaks, Lindens, etc. They are all Nursery grown, transplanted trees.

These Oaks are representative of the quality of the large trees we are prepared to supply for you. Tell us your requirements and let us quote you on available sizes and varieties.

Experience has shown that trees of this quality, handled after the manner for which we are equipped, can be depended upon to give satisfaction—"quick shade—without years of waiting."

We invite you to make your own selection of specimen trees suited for your requirements—or, we will gladly tell you fully about them, either by letter or the call of a competent representative.

Some of the varieties and sizes follow:-

Norway Maple, 6 to 10 inches caliper Horsechestnut, 6 to 10 inches caliper White Dogwood, 4 to 6 inches caliper European Beech, 6 to 10 inches caliper Purple Beech, 5 to 10 inches caliper Willow Oak, 5 to 10 inches caliper Lindens, 6 to 12 inches caliper

TRY MOON'S FOR BIG TREES

MOON'S EVERGREENS

VERGREENS represent an extremely and justly popular class of hardy plants. They are immediately effective after planting, and they maintain their richness of foliage the year 'round. In fact, they are perhaps, appreciated most in Winter when they stand out in such striking contrast to the barrenness of the surrounding landscape. With their branches arched and laden with snow, they present a picture of indescribable beauty.

There is great diversity in the habit of growth and color of foliage among Evergreens. In colors, there are deepest and lightest greens,

tints of gold, and soft steel greys and blues.

In this family there is truly "a plant for every place and purpose"some for the limited areas of foundation plantings or for bed and border uses, others for screens, hedges and windbreaks and for group and specimen plantings.

The following key is designed to assist in the selection of Evergreens of the different types best suited for the location in which it is

desired to plant them:

Varieties marked (L) usually attain a height of 60 ft. or over at maturity; (M) 30 to 60 ft.; (S) 10 to 30 ft.; (D) 4 to 10 ft.; (VD) below 4 ft. It should be noted in the description of varieties and group headings, however, that many sorts are shearable, and therefore adaptable to limited areas.

Prices of Evergreens include digging with ball and burlap except where otherwise noted.

BIOTA. See under Thuja, page 10.

CHAMAECYPARIS—Japanese Cypress, Retinospora

A useful family with varieties suited for foundation, hedge, specimen and group planting. While some kinds attain large size if allowed to grow naturally, most of them are readily shearable and thus can be kept within bounds and adapted for use in limited areas. Always plant this family in sunny exposures.

CHAMAECYPARIS obtusa crippsi.

Graceful fronds of bright golden foliage. Color held well throughout the year. Excellent for color contrast in bed planting.

1½ to 2 feet		Per 10 \$30.00
2 to 2½ feet	5.00	40.00

obtusa gracillis. Slender Hinoki Cypress. (S)

Dark green foliage on branches light and graceful at ends. Narrow outline, slow growth. Very beautiful trees, for groups or specimens.

6 to 7 feet 20.00

obtusa nana. Dwarf Hinoki Cypress. (VD)

Dense, heavy, dark green fronds. Very slow growing . For beds or low hedges and Japanese rock gardens.

Prices in Moon's catalogs include delivery by motor truck over a wide area including suburban Philadelphia, metropolitan New Jersey as well as more local points.

This catalog leaves nothing to your imagination about the size of the stock we propose furnishing at the prices given.

JUNIPERUS-The Junipers and Redcedars

Junipers possess great hardiness and vigor, and embrace a wide diversity of foliage, color, form and size. There are Junipers for almost every place and purpose where Evergreens are used, where the soil is well drained and there is plenty of sunshine.

JUNIPERUS chinensis columnaris.	Columnar Chinese Juniper. (S)

MOON'S EVERGREEN SHRUBS

Broad-leaf Evergreens

A group of Shrubs, mostly shade loving, and usually of splendid foliage. Some varieties are particularly profuse and colorful in their bloom. Their fondness for shade adapts them for use about shady house foundations and elsewhere where it is difficult to get other plant material to thrive through lack of sunlight.

Cultural Notes. As a rule, these varieties transplant very easily and give immediate effects, but it must be borne in mind that they do not like limestone soils, and thrive most readily in what is known as "woods earth," or ground composed chiefly of decomposed vegetable matter.

It is also important to remember that the varieties in this class are most successful when planted in groups, with a mulch of leaves maintained the year 'round to keep the roots moist, for they lie very close to the surface of the ground.

ABELIA grandiflora. Glossy Abelia. (VD)

A graceful shrub, semi-Evergreen, with shining dart-shaped leaves. Blooms consistently from July to frost, bearing dainty white, tubular flowers, flushed pink.

			Each	Per 10
2	to 3	feet	1.50	13.00

MOON'S HARDY AZALEAS

Flowers are colorful and borne profusely. Adapted for use in the foreground of beds of Broad-leaf Evergreens or Conifers, in groups or masses by themselves, as terrace borders and in rockeries. Tolerant of considerable shade, but bloom best in open sunlight.

PACHYSANDRA

PACHYSANDRA terminalis. Japanese Spurge. Evergreen, dark green leaves, valuable for planting in shady places where grass will not grow. Effective for planting as a ribbon border to walks and drives or to Evergreen beds. In combination with Trailing Junipers, or by itself it is popular in terminal planting in the property of the pro
race and bank plantings. Per 10 Per 100 Per 1000 Strong 2-year plants
PIERIS—Andromeda
PIERIS japonica. Japanese Andromeda. (VD) May. Racemes of small white flowers. Low, bushy habit. Splendid in Broad-leaf Evergreen groupings. Each Per 10
1 to 1¼ feet 2.00 17.50
PYRACANTHA—Firethorn
PYRACANTHA coccinea lalandi. Firethorn. (D) Upright, picturesque habit, semi-Evergreen foliage. Chiefly popular because of its clusters of showy orange-scarlet fruit in Autumn. For massing, Broad-leaf groupings and for training against walls. Needs Winter protection while small north of Philadelphia.
Each Per 10 1 ½ to 2 feet
RHODODENDRON
RHODODENDRON carolinianum. Carolina Rhododendron. (D) June. Small, dark green leaves. Pink flowers, borne in profusion. For naturalistic planting and foreground of Rhododendron beds where it supplies the color for which Hybrid Rhododendrons are so much admired.
Each Per 10 1½ to 2 feet
2 to 3 feet
catawbiense. Catawba Rhododendron. (D) May. Pinkish lilac flowers in late Spring. A desirable substitute for Rhododendron hybrids.
Each Per 10 1½ to 2 feet
2 to 3 feet
maximum. Rosebay Rhododendron. (D)
June, July. White to tinted rose-pink flowers. The favorite variety for undergrowth in woodlands, natural effects along walks and drives, and for foundation planting in shady places.
Each Per 10 2 to 3 feet
3 to 4 feet
The varieties included in this group are those which produce such a gorgeous display of bloom during the month of May. The flower colors include varying shades of pink, red and lilac, while some are pure white. Write for sizes and colors available. YUCCA
YUCCA filimentosa. Common Yucca (Adam's Needle).
Sends up tall stalks laden with ivory-white flowers in June and July from a base of spreading, sword-like leaves. Desirable alone or in shrubbery and herbaceous borders.
Each Per 10

MOON'S TREES

Deciduous Trees are often thought of chiefly for shade, yet there are varieties that vie with the choicest flowering plants in the wealth and beauty of their bloom and showy fruit. The foliage of some kinds turns into gorgeous Autumn tints. Background, accent, screen and windbreak effects are readily achievable through their use. Varieties that hold their dried leaves all Winter harbor the Winter birds; those with contrasting shades of bark add interest to the landscape all year 'round.

In our assortment of Ornamental Trees will be found varieties for all these uses. There are some of limited dimensions, adapted for the smallest lawns; others better suited for more expansive areas; some are tolerant of built-up city conditions; most all are dependable in the more open spaces in the suburbs.

Where trees are graded by caliper as well as by height it is understood that their value is determined by the caliper. The height may vary and the figures given are only mentioned to give an approximate idea of the size.

That the unacquainted may have an idea of the height to which each tree may be expected to grow we have marked the varieties as follows: (L) designates trees growing to 60 feet or over at maturity; (M) from 30 to 60 ft.; (S) 20 to 30 ft.; (D) 10 to 20 ft.; (VD) less than 10 ft. "B. & B." indicates trees dug with ball of earth about their roots and wrapped securely with burlap.

ACER-Maples

The large growing types are mostly of comparatively rapid growth and of long life. Some have showy Spring bloom and Autumn foliage color. Dwarf, slow growing types are also included in the group, and are useful as indicated in the descriptions.

ACER platanoides. Norway Maple. (M)		
Relatively rapid growing, round-headed symm	etrical	tree with
large, deep green leaves, yellow in Autumn. Y	ellow	flowers in
Spring. For lawn, avenue or street planting.		
7	Each	Per 10
8 to 10 feet, $1\frac{1}{4}$ to $1\frac{1}{2}$ inches	5.00	40.00

BETULA—Birches
The Birches are light, airy trees, valued not only for their foliage
effect and graceful habit but also for their attractive bark. Birches do
well in most good soils, whether dry or moist, are attractive whether
planted singly or in clumps and their beauty is best displayed with an
Evergreen background.
Birches require severe pruning and abundant watering to enable
them to establish themselves. It should be noted, also, that the white barked varieties assume this characteristic with age and that young trees
often are not white.
BETULA alba. European White Birch. (M)
With age the ends of the branches are somewhat pendulous and
the bark extremely white. Each Per 10
6 to 8 feet, B. & B 4.00 35.00
8 to 10 feet, B. & B 6.00 50.00
nigra. River Birch. (M)
Shaggy, reddish orange bark. Fine for naturalistic work in
moist places. Each Per 10
8 to 10 feet, B. & B
10 to 12 feet, B. & B
pendula gracilis. Cutleaf Weeping Birch. (M) Deeply cut leaves on slender branches that droop gracefully as
the tree develops. With age, the bark becomes white.
Each Per 10
10 to 12 feet, $1\frac{1}{4}$ to $1\frac{1}{2}$ inches, B. & B 6.00 50.00
12 to 14 feet, $1\frac{1}{2}$ to 2 inches, B. & B 8.50 75.00
14 to 16 feet, 2 to $2\frac{1}{2}$ inches, B. & B 11.00 90.00
populifolia. Gray Birch. (M)
Graceful habit with light and airy foliage. Grayish-white bark.
When once established will grow in dry ground and poor soils. The clumps with several stems here offered are well suited for
naturalistic plantings and as lawn specimens and groups.
Each Per 10

White Birches always make ideal specimens and groups because of their light, airy foliage in Summer and their graceful branches and white bark the year round. Among Evergreens this white bark makes them particularly effective. On page 15 we offer clumps that will give an effect similar to the illustration.

MOON'S SHRUBS

Individually or collectively, shrubs are an important feature in the adornment of any grounds. As specimens, and allowed space for symmetrical development, their grace and beauty appears to perfection. In groups they can be made to emphasize some feature of the lawn, to screen the garage, the laundry yard, or some unsightly view; or to shield the porch and relieve the strong, stiff lines of the foundation walls. Along borders of the lawn, on banks and slopes, along walks and drives and in corners, collections of shrubs may be gathered that will give a succession of bloom from the opening of Spring until Autumn. The Autumn color which the leaves of many varieties assume sets the lawn ablaze at that season. The brilliant berries of some sorts tempt the birds to linger, and together with the bright bark of such shrubs as some of the Dogwoods, give a tone of color even to the gray landscape of Winter.

Shrubs that usually grow over 12 feet are marked (L); from 8 to 12 feet (M); from 6 to 8 feet (S); from 3 to 6 feet (D); and 3 feet or below (VD).

The months of the year mentioned in the descriptions indicate the

season when the shrub usually flowers.

edgings and borders.

SYRINGA VULGARIS HYBRIDS

The Hybrid Lilacs listed below differ from the Common Lilacs in that their flower clusters, coming about the second week in May, are larger and their fragrance even more entrancing.

For late spring we recommend transplanting with ball. Prices of all

Hybrid Lilacs are as follows:

Without	Ball		With	Ball	
	Each	Per 10		Each	Per 10
2 to 3 feet	.90	7.00	2 to 3 feet	1.25	10.00
3 to 4 feet	1.25	10.00	3 to 4 feet	1.75	16.00
4 to 5 feet	2.00	17.50	4 to 5 feet	2.50	22.50
5 to 6 feet	2.50	22.50	5 to 6 feet	3.50	30.00

Our Lilacs are grown on their own roots. Plants grown in this manner are far superior to those which are more cheaply produced by budding and grafting for they do not send up shoots from the roots of the parent stock.

Charles Joly. Very dark reddish-purple. Double. 2 to 3 feet; 3 to 4

feet; 4 to 5 feet.

Charles the Tenth. Single flowers in broad, thick clusters, light lavender with a bluish tinge. Buds reddish-purple. 2 to 3 feet; 3 to 4 feet; 4 to 5 feet.

Congo. Single, very large in full clusters. Deep purplish violet. 2 to 3

feet; 3 to 4 feet.

Frau Bertha Dammann. Large, single white flowers in immense clusters. 2 to 3 feet; 3 to 4 feet; 4 to 5 feet.

Jeanne D'Arc. Large clustered, double; white. 2 to 3 feet; 3 to 4 feet;

4 to 5 feet.
g Spaeth. Flowers large and single, in very large, long, pointed 2 to 3 feet; 3 to 4 feet; Ludwig Spaeth. Flowers large and single, in very large, long, Flowers clusters. The color is very rich purple. 2 to 3 feet; 3 to 4 feet;

Mme. Casimir Perier. White; double in medium sized clusters. Dwarf habit. 2 to 3 feet; 3 to 4 feet; 4 to 5 feet.

Mme. Lemoine. Fine, immense clusters of double white flowers. of the best. 2 to 3 feet; 3 to 4 feet; 4 to 5 feet; 5 to 6 feet.

Marie Le Graye. White. Single flowers in large, full clusters. 2 to 3

feet; 3 to 4 feet.

Michel Buchner. Very large trusses of double florets, pale lilac in color, shaded blue on interior of petals. Buds deep pinkish-lilac. 2 to 3 feet; 3 to 4 feet; 4 to 5 feet.

President Grevy. Double. Clusters large and full. Buds pale tones of lilac; flowers light blue. 2 to 3 feet; 3 to 4 feet; 4 to 5 feet;

5 to 6 feet.

d

Red Marly. Single, in large full clusters. Flowers lilac touched with blue. Pinkish buds. 2 to 3 feet; 3 to 4 feet; 4 to 5 feet; 5 to 6 feet.

Long, rather loose clusters; flowers large and single. Same color as Ludwig Spaeth; more free blooming. Comparatively dwarf and spreading in habit. 2 to 3 feet; 3 to 4 feet; 4 to 5 feet.

VIBURNUM—Viburnums

Most varieties grow satisfactorily in partially shaded places, although they will, of course, flower better in sunny locations. Beautiful Autumn foliage is displayed by some varieties. Others are valued for their ornamental berries.

VIBURNUM carlesi. Fragrant Viburnum. (D) Pinkish white fragrant flowers in early May.

Any path may be transformed into a garden walk if planted with Moon's Shrubs. Lilacs will give color and fragrance during spring days. The Honeysuckles, Viburnums and Dogwoods will add beauty and attract birds during Autumn months.

MOON'S ROSES

BEDDING ROSES

These Roses are 2-year plants, potted, cut back, and should give an abundance of bloom the first season after planting.

Potted Roses such as we supply are ready to give immediate effects the first season, but it is usually best not to plant them until the weather is thoroughly settled, usually after April 20th.

No pruning is usually required the first season. Subsequently, however, trimming down to 3 to 5 buds should be done in early Spring.

A dirt mound 6 inches high about each plant serves as excellent Winter protection especially when supplemented by a four-inch layer of light manure or straw as a mulch. This mounding of earth should be done in late Autumn, and the mulch applied after the ground freezes.

The following list includes a few of the most popular varieties. We can supply other popular varieties at prices quoted below.

> Per 10 Per 100

Strong 2-year plants from 5- and .90 8.00 75.00 6-inch pots

Frau Karl Druschki or White American Beauty. A beautiful snowwhite rose, opening from pink-tinged buds.

Gruss An Teplitz. Bright, rich scarlet blooms, borne in open clusters.

Extremely fragrant. Bud ovoid; flower cupped.

Mme. Butterfly. Color a blending of bright pink, apricot and gold.

Beautiful in bud and flower, delightfully fragrant.

Mme. Edouard Herriot (Daily Mail). Coral red, shaded with yellow. Medium size, semi-double. Bud ovoid; flower globular.

Large, full, well-formed flowers of shaded cream and goldenyellow. Bud pointed; flower cupped.

Radiance. Silvery pink blooms that are large and fully double.

Red Radiance. A continuous bloomer with deep red, compact, globular Bud globular; flower globular.

Souvenir De Claudius Pernet. Large, full, beautifully formed flowers, a striking sunflower-yellow, deepest in the center.

CLIMBING AND TRAILING ROSES

When the vines grow rank and considerably out of bounds, cut out about two-thirds of the old (dark-colored) stems and train those remaining as desired. Such pruning can be done either immediately after they finish flowering or in late Winter.

Each Per 10 Per 100 .75 7.00 Price, all varieties; strong 2-year plants 60.00 CHRISTINE WRIGHT. Large double flowers of a bright rose pink, beautiful in bud as well as when fully blown, borne in large clusters on long stems. Blooms profusely in June, sparingly throughout the Summer.

DOROTHY PERKINS. The beautiful shell-pink flowers are double and borne in clusters. Very fragrant and produced relatively late in the rose season.

DR. VAN FLEET. Buds and flowers borne individually on long stems and are comparable to the Hybrid Teas. The color is flesh-pink shading to rose-pink in the center. Very fragrant and very prolific in flower with a long season of bloom.

EXCELSA (RED DOROTHY PERKINS). Similar to Dorothy Per-

kins but has red flowers.

GARDENIA (Hardy Marechal Neil). Beautiful buds of a rich buff color opening into moderate sized creamy-white flowers with yellow centers.

PAUL'S SCARLET CLIMBER. A semi-double medium sized rose of intense scarlet color. The blossoms occur in small trusses and are especially fine in bud.

MOON'S VINES

As a class Climbing and Trailing Vines are rapid growers. They are useful for giving quick shade over verandas and trellises. On steep banks they prevent erosion. They ramble over unsightly, neglected places and make them beautiful.

There are vines for either sunny or shaded situations. Boston Ivy is one of the most dependable and vigorous growers for partial shade; Clematis is also a shade-enduring Vine. The Evergreen Euonymus and

the English Ivy will do well with ever so little sunshine.

For Autumn foliage color plant Ampelopsis. For flowers, Bignonia,

Lonicera, Clematis, Polygonum and Wisteria are best.

AMPELOPSIS—Creepers AMPELOPSIS heterophylla. Porcelain Ampelopsis. A beautiful vine, especially when, in Autumn, it bears a profusion of pale lilac to bright blue berries. For covering low walls, rocks and trellises. Each Strong plants from 5 inch pots 5.00 tricuspidata (veitchi). Japanese Creeper (Boston Ivy). Strong, rapid grower. Large, maple-like shiny leaves that turn brilliant red and orange in Autumn. A tenacious clinger; good for covering brick and stone walls. Each Per 10 .75 5.00 Strong plants from 4-inch pots BIGNONIA—Trumpet Creeper Old-fashioned favorites of heavy growth. Adapted for covering stone and rail fences, old trees, stumps and telephone poles. Trumpetlike flowers in mid-Summer. BIGNONIA grandiflora. Chinese Trumpet Creeper. Orange-red flowers. Each Per 10 Strong 3-year field-grown plants75 5.00 Trumpet Creeper. radicans. Deep scarlet flowers. Each Per 10 Strong 3-year field-grown plants50 4.00 CELASTRUS —Bittersweet CELASTRUS scandens. American Bittersweet. A heavy, woody vine useful in much the same way as Bignonia, described above. Red berries with orange cappings. Splendid for cutting for indoor Winter decoration. Each Per 10 2 to 3 feet, 3-year, heavy 5.00 CLEMATIS CLEMATIS paniculata. Sweet Autumn Clematis. Luxuriant, light green foliage. Fragrant, white star-like flowers in August. Ideal for trellises, pergolas, fences or old dead trees in sun or partial shade. Each Per 10

EUONYMUS

Evergreen Vines that will cling to almost any support and are splendid wall covers. All are good ground covers for terraces or under trees. Tolerant of considerable shade.

EUONYMUS patens. See under Evergreen Shrubs, Page 12 radicans. Wintercreeper.

MOON'S PERENNIALS

(Old-Fashioned Flowers)

Moon's Hardy Perennials are offered in strong field-grown clumps in most varieties. Note the extent of our assortment.

To assist in spacing Perennials we offer the following suggestions: Dwarf plants for foreground and edging, one foot apart; medium-growing varieties for the main planting areas, 15 to 18 inches apart; tall, bushy types and plants like Peonies, 2 to 3 feet apart.

The following is the descriptive price list of the Hardy Perennials we offer. The size mentioned in the description indicates the approximate height the plants may be expected to attain at maturity; the

months represent the season of bloom.

Perennials take very little room and there are varieties suited for partial shade as well as for sunny locations. Consequently they are

adapted for even the smallest lawns.	Three	Per 10
ACHILLEA ptarmica. Pearl. 2 feet.		
June to October. Irregular clusters of small,		
double white flowers. Good for cutting	.75	2.00
ALTHEA rosea. Hollyhocks. 4 to 6 feet.		
July. Colossal spikes of bloom. Narrow habit.		
Effective in background of Perennial borders,
